|---|---|
| WHAT | • It is a unified "Super system" and centralized software platform designed to consolidate all community services into one ecosystem.<br>• It replaces fragmented, single-purpose apps by combining IoT physical access control, an AI-driven maintenance help desk, a central financial gateway, context-aware communication feeds, and a zero-transaction "Sharing Bank" for the local community. |
| WHO | • Primary Users: Verified residents living within the community who need a frictionless way to manage their homes, interact with neighbors, and access services.<br>• Secondary Users: Property managers, Homeowners Association (HOA) board members, and security personnel who need centralized administrative, financial, and access-control tools.<br>• Tertiary Users: Authorized guests, delivery drivers, and maintenance vendors who require temporary, trackable access to the neighborhood. |
| WHERE | • Available as a mobile application for residents and a web-based dashboard for community management. |
| WHEN | • Real-time, 24/7: The system operates continuously as the central operating system for a resident's daily routine. |
| WHY | • The current existing system is too focused on one thing like security or property management or community self support . We cover it all |
